

All the diamond products are manufactured by Microdiamant AG – world leading producer of synthetic diamond.

Exactness of grain sizes (Highest calibration) provide the best quality of polished surface and repeatability of results.

Diamond compounds

are recommended for saturation of new polishing pads with diamonds field metallography, preparation of non water proved materials. Easy to apply, ideally for manual work.

Sparkling M/W

High concentrated monocrystalline diamond compound. Available in syringes 10 Grams

Sparkling M/W and P/U

High concentrated monocrystalline M/U and polycrystalline diamond compound. Available in syringes 5, 10 and 20 Grams

Lubricants

Lubricant Yellow water based and Lubricant Blue alcohol based Smearing, cleaning and protecting pads against overheating during polishing. Recommended to use with mentioned above diamond compounds

It is one of our mean Targets to protect your Health and environment. All the diamond suspension / pastes do not contain any benzene and other organic solvents.
